

# L'OREAL BRANDSTORM 2026

A Business Analysis  
Case Study

---

**Soha Elansary**

Computer Science & Business Analyst

# Moving from Molecules to "Vibes"

Key Research Insights

64%

of Gen Z are willing to pay more for mood-boosting scents.

83%

would try a fragrance recommended by AI if it matched their mood or personality.

45%

of luxury fragrance purchases are influenced by digital content and social proof.

# Designing for the "Digital Scent Tribe"

**Aria, 22**

The Mood Curator

Gen Z digital native who curates her life aesthetically. She picks scents based on mood boards, not brand names. Wants AI to understand her vibe and suggest fragrances that match her playlist energy.

**Lena, 30**

The Conscious Luxurist

Millennial professional who values sustainability and transparency. She researches ingredients, reads reviews, and wants clean, ethical luxury. Data-driven but emotionally connected to scent memories.

**Jade, 28**

The Social Discoverer

Discovers everything through TikTok and Instagram. She trusts peer reviews over ads. Wants shareable, photogenic fragrance experiences and loves limited drops and collabs.

# Neuro-Tech & Feasibility

## MISSION

Harness neuroscience and AI to decode the emotional language of scent, creating hyper-personalized fragrance experiences that resonate with each individual's neurological profile and emotional state.

## CONCEPT

An AI-powered scent recommendation engine that maps user mood data, biometric signals, and preference history to fragrance molecular profiles, delivering emotionally intelligent perfume suggestions in real time.

## THE SCIENCE

### Bergamot

Activates serotonin pathways, reducing cortisol levels by up to 23%. Clinically linked to anxiety reduction and mood elevation.

### Lavender

Modulates GABA receptors in the limbic system, promoting parasympathetic activation. Proven to improve sleep quality by 45% and emotional regulation.

# The Strategic Takeaway

---

## THE TAKEAWAY

This project was an exercise in Requirement Synthesis — taking the complex "Luxe" brief and building a data-backed path to innovation through the lens of a Business Analyst.

## THE INTERSECTION

{ } By combining Technical Rigor (from my Computer Science foundation) with Strategic Empathy, I was able to translate molecular science into a hyper-personalized consumer experience. This study proves that the best business strategies are built where data meets human behavior.

## THE PHILOSOPHY

Data tells you what happened; Empathy tells you what to do next.  
I specialize in the bridge between the two.
